IPC Chair	Mr Valentino Castellani Mayor, City of Turin

# Overview

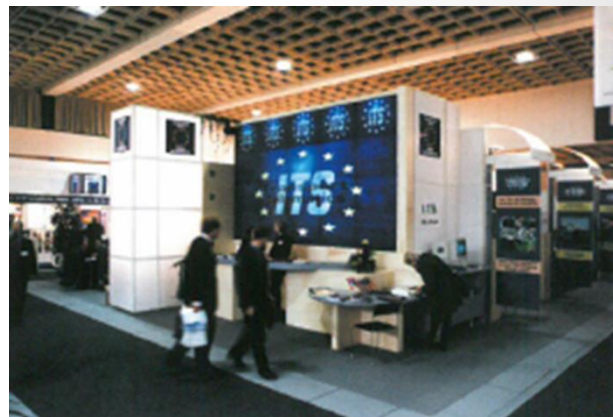

Under the theme of 'From Vision to Reality' Turin 2000 marked the coincidence of three trends: the concept of an Information Society, the shift of ITS from experimental devices to off-the-shelf products and the combination of services, for example route guidance combined with parking information or traffic management systems linked to emissions monitoring. The e-Europe 2002 Programme featured strongly with its emphasis on adding intelligence to air, maritime and rail transport as well as road. Applications of ITS to freight and to environmental impact mitigation were prominent in Turin together with a range of services to support public transport operations. A key demonstration and technical tour was the use of ITS to manage extensive areas of the whole city of Turin.

The Congress featured 2 Plenary Sessions and Round Tables, 15 Executive Sessions, 10 European Commission Special Sessions, 30 Special Session and 145 Technical/Scientific Sessions
